

# Environment and Resource Efficiency Plans (EREP)

# Resource Efficiency Indicators

# What do we require?

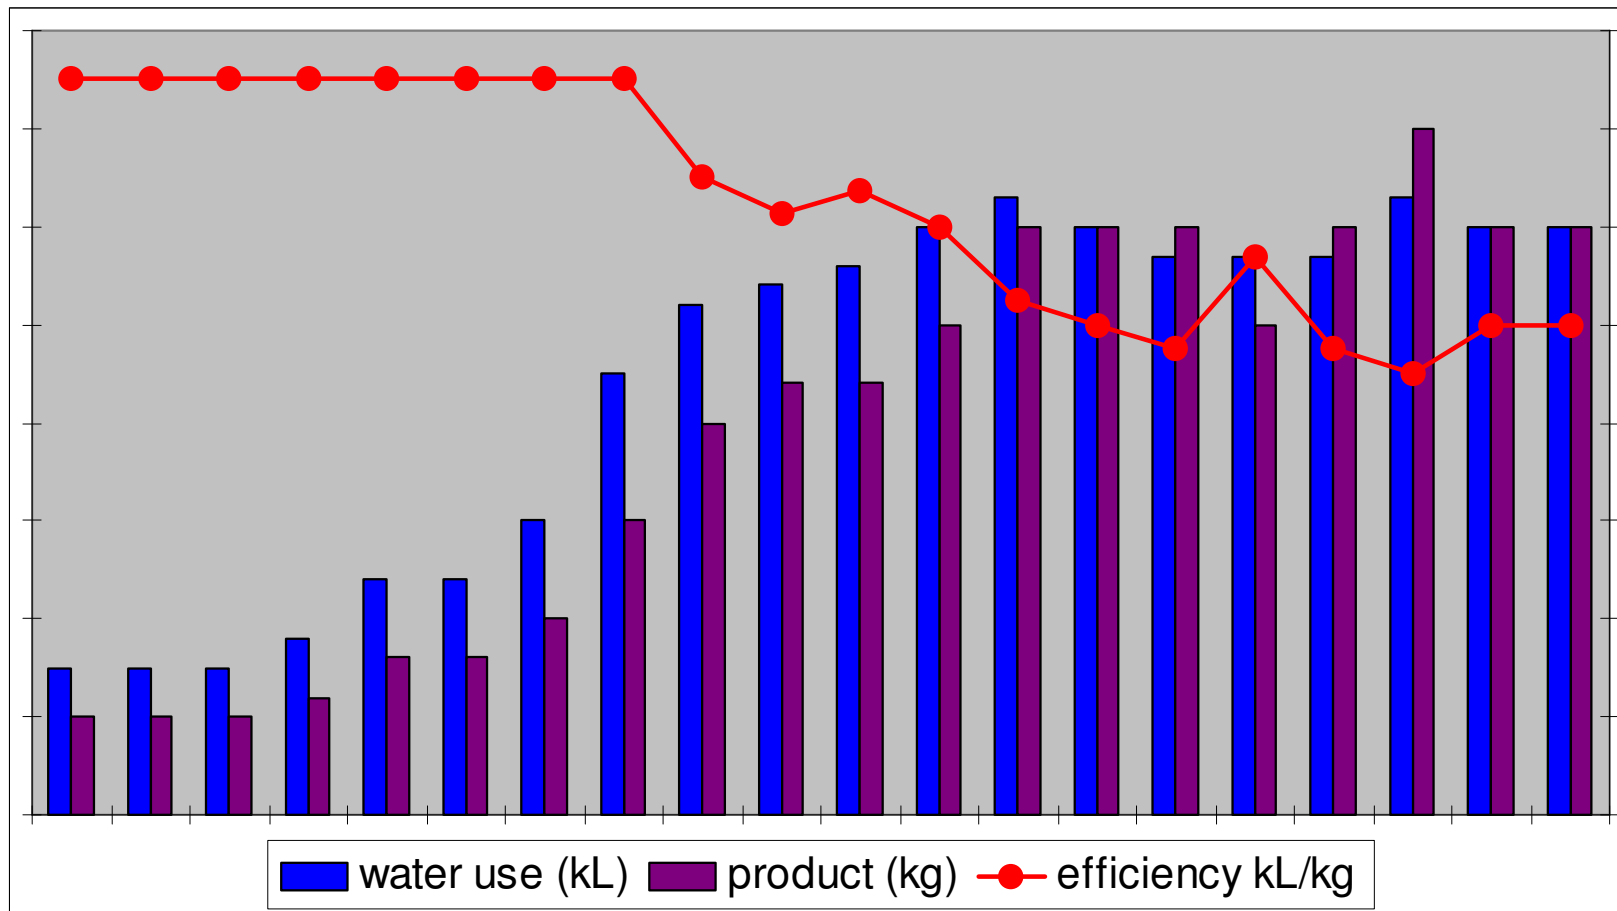

- Business specific indicator
- Related to baseline data (whole site)
- Comparison to:
  - Industry standard (where available)
- Enter indicator and level of activity online
- Attach additional information if required

# What are they and why use them?

- Give resource consumption some perspective
- A link to business activity eg key input or output

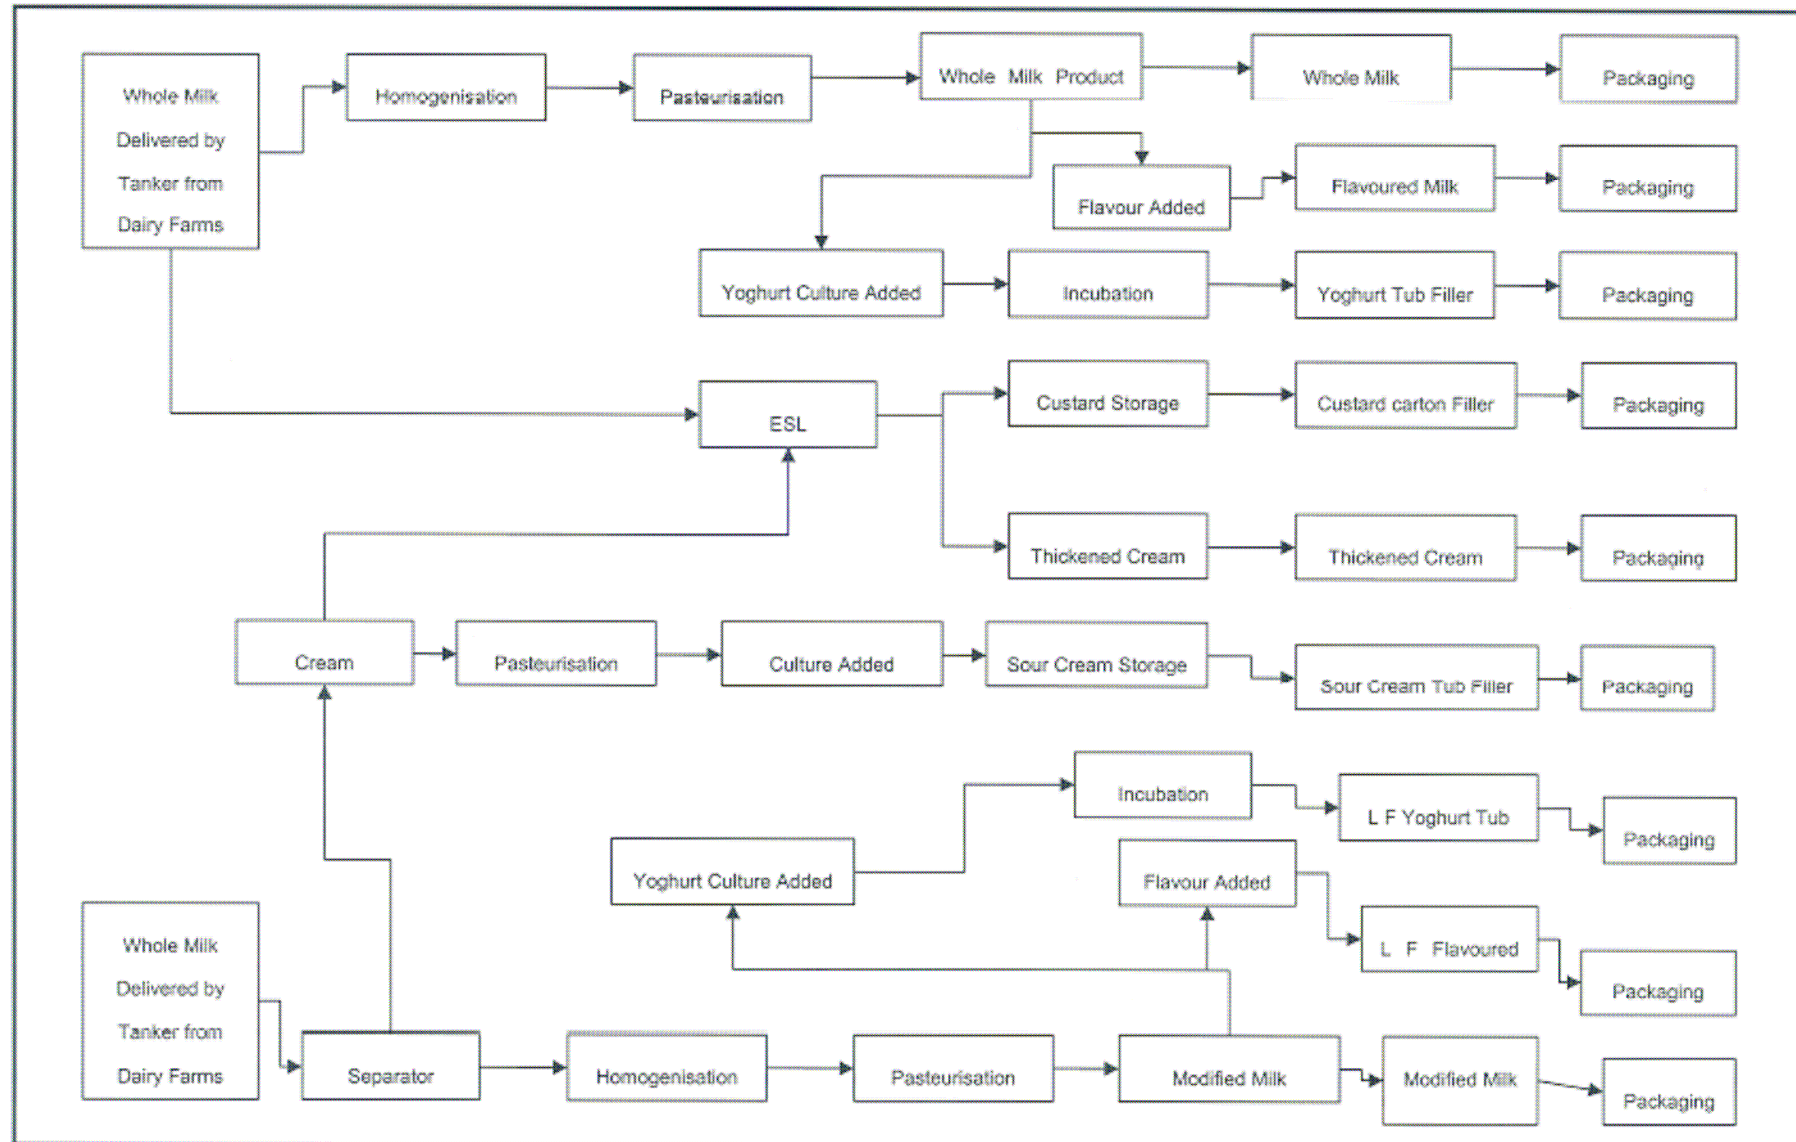

# Resource Efficiency Indicators

- **Examples**

- kWhr electricity used / Kg of pet food produced
- ML water consumed / tonne of paper manufactured
- L of diesel consumed / container unloaded (port operation)
- kg of solid waste / m<sup>2</sup> floor space (commercial premise)
- L of water / litre of milk processed

# Milk processing

# Industry standards

## Sources

- Industry peak bodies
- Water corporations
- EREP relationship manager
- EREP toolkit module 5

## Comparison

- Note what factors affect your efficiency (eg product mix in dairy manufacturing)
