

Environment and Resource Efficiency Plans (EREP)

Opportunity Identification

What do we require and why

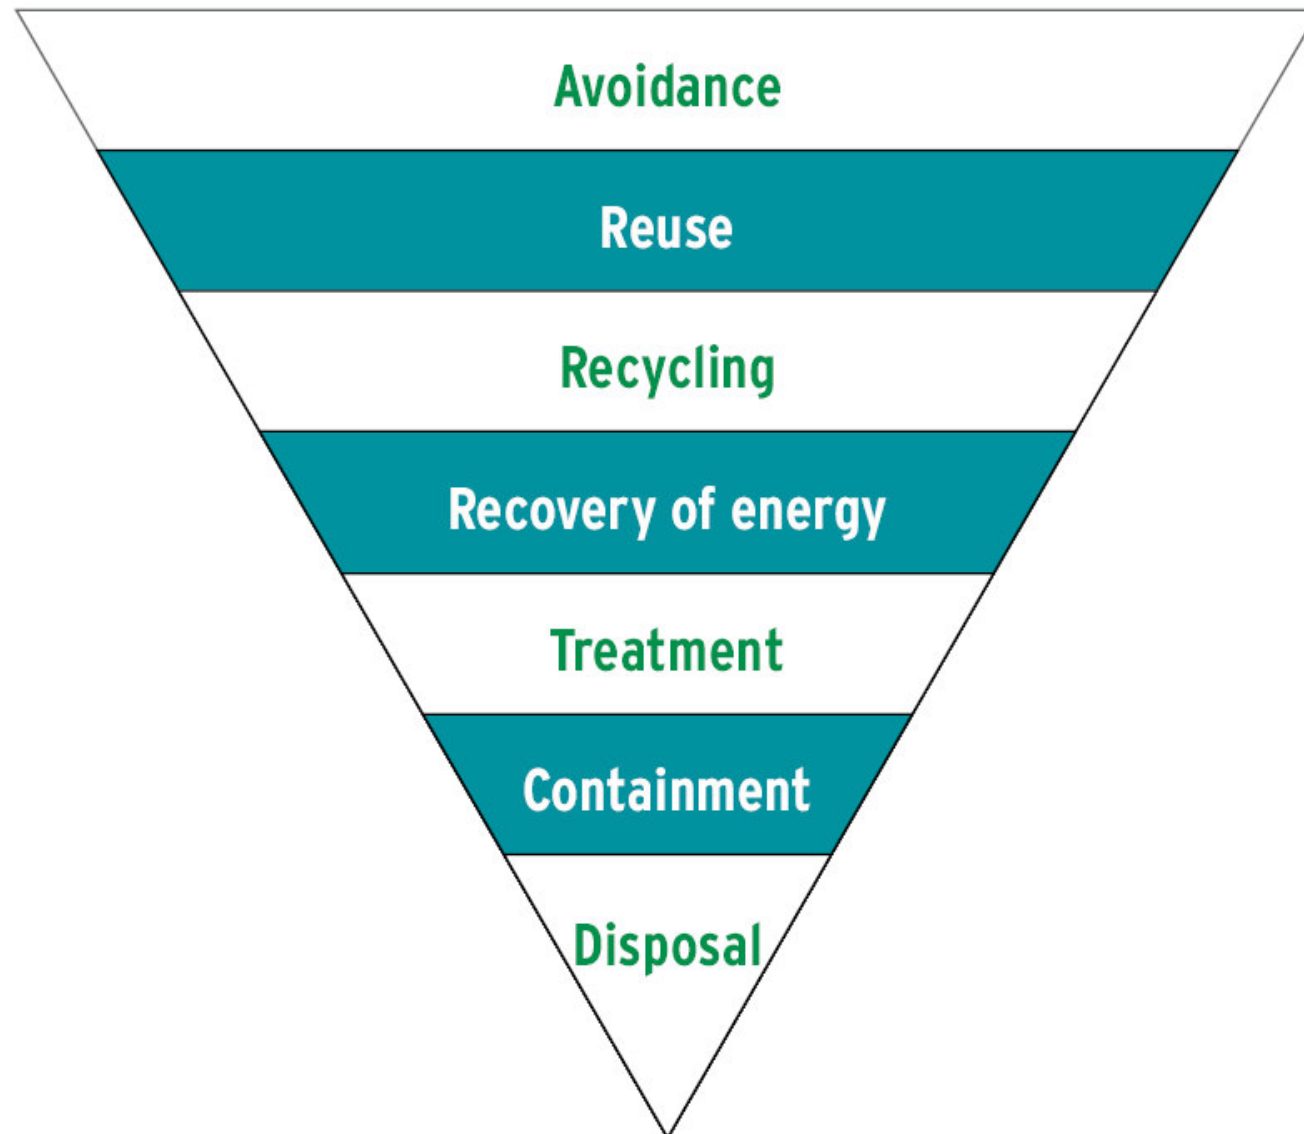

- Identify and assess opportunities to improve resource efficiency.
- Each major resource using and waste generating activity must be examined.
- Things to consider ??
- Sufficient information about why opportunities were developed OR delayed ?

Possible approaches

- Start with broad/open minded approach.
- Use of mass balances and resource flow diagrams to find opportunities.
- The process needs to be what best suits each site.
- Data analysis, site walkthroughs.
- Develop Continuous Improvement Techniques.

A Useful Model

Who to involve

- Who are best people to do this ??
- Broad cross-section of management and operational staff.
- Skilled and committed people.
- Why have different people involved??
- Need people with influence across the operation.

What to look for

- Management Opportunities
- Technical Opportunities
- Investment Based Opportunities
- Existing Opportunities based on EEO Assessment and/or WaterMAP.
