

VICTORIA'S AIR QUALITY 2008

AIR MONITORING DATA

- Section 1 - Report Card** an assessment of compliance with the air quality goals and objectives
- Section 2 - Trend analysis** an update of the overall trends in air quality in Melbourne
- Section 3 - Monthly Data Tables** tabulated monthly air quality statistics

Section 1- Report Card

Compliance with Air Quality Objectives

Assessment of Victoria's air quality on a station-by-station basis

The numbers in the table indicate the number of days the objectives were not met.

--	------------------------	--	--	--	--------------	--	---	---

* Monitoring for this pollutant did not meet the data capture target (ie. 75% data capture in each quarter of the year)

On an annual basis, EPA assesses the air quality monitored at each station against the state and national air quality objectives and goals.

The numbers presented in the Table show the number of days that an air quality objective was not met.

Shading is used to indicate the assessment against the goals, with:

- *Green shading* indicating that the 2008 goal was met;
- *Red shading*, that the 2008 goal was not met; and
- *Yellow shading*, that whilst the 2008 goal was met, there were still days when the objective was not met

Monitoring instruments not meeting the data capture target are indicated by an asterisk and cells are not shaded yellow or green.

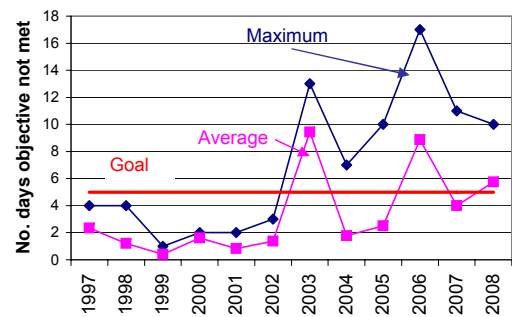

A blank cell indicates that monitoring for a particular pollutant was not performed at this station.

Note, for PM_{2.5} there is no 2008 goal and monitoring occurs on a one-day-in-three basis.

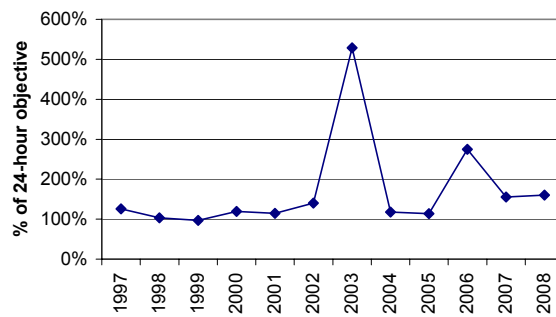

Section 2 - Trend analysis

Trends of air quality in Melbourne

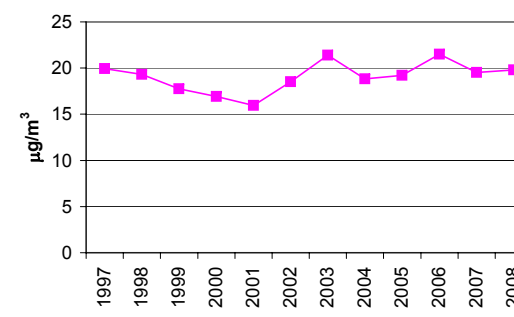

1. Particles smaller than 10µm (PM₁₀)

(a) Days not meeting the PM₁₀ objective

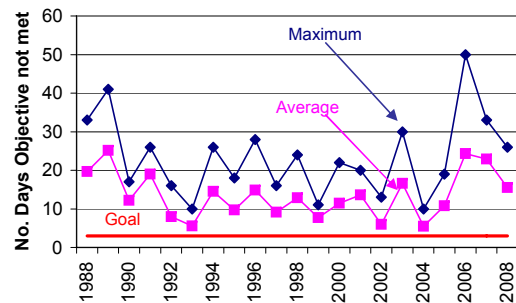

(b) Maximum 24-hour PM₁₀

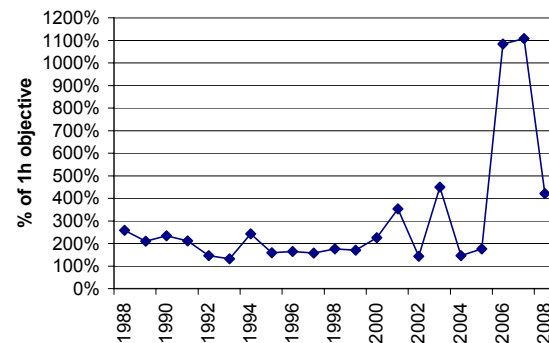

(c) Annual average PM₁₀

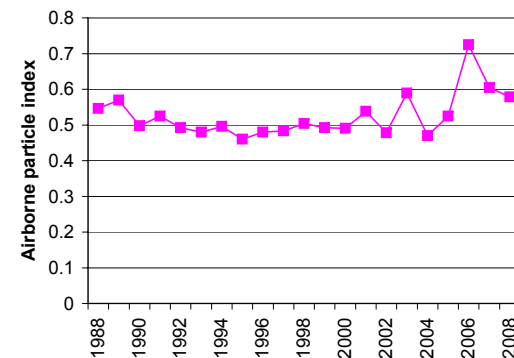

2. Visibility measured as API

(a) Days not meeting the visibility objective

(b) Maximum 1-hour API

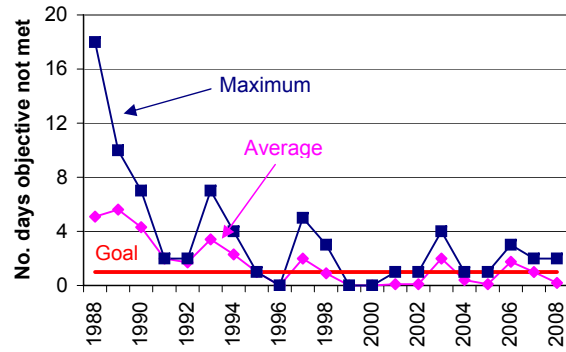

(c) Annual average API

A range of trend parameters for Melbourne are presented:

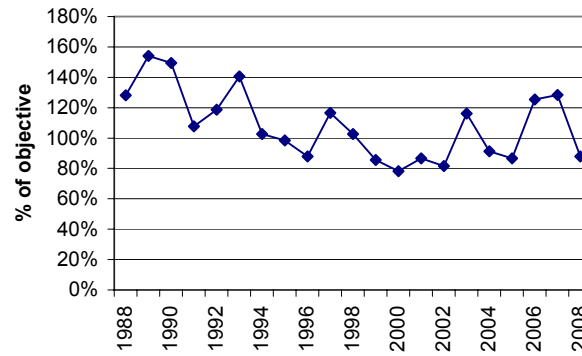

- Days not meeting the objective – Two values for this parameter are presented. The maximum number gives the value for the station recording the highest number of days not meeting the air quality objective each year (that is, the worst performing station that year). The average number (calculated by averaging the number of days at each station in Melbourne) is a better indicator for how Melbourne is performing overall rather than simply looking at an individual station.
- Maximum pollutant levels – This looks at the highest pollutant levels recorded over the year. The value is calculated by averaging the maximum pollutant levels recorded at each monitoring station in Melbourne over any one year.
- Average pollutant levels – In addition to the peak levels, we are also interested in the average pollutant level across Melbourne for the year. This is calculated by averaging levels from each station.

Trends of air quality in Melbourne (continued)

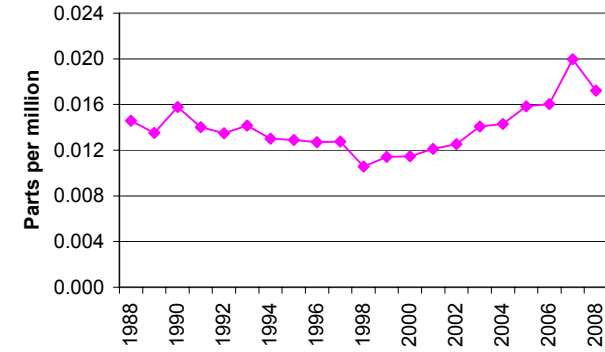

3. Ozone

(a) Days not meeting the four-hour ozone objective

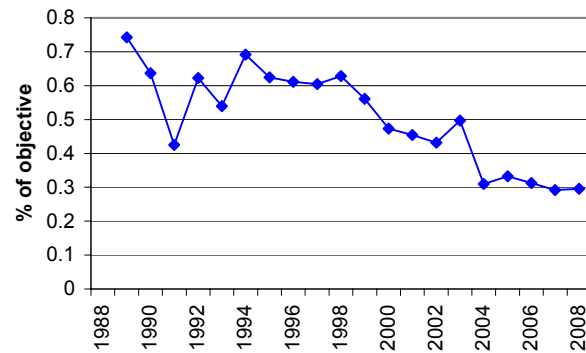

(b) Maximum four-hour ozone

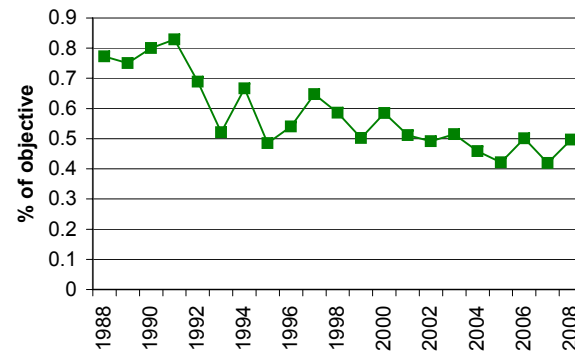

(c) Annual average ozone

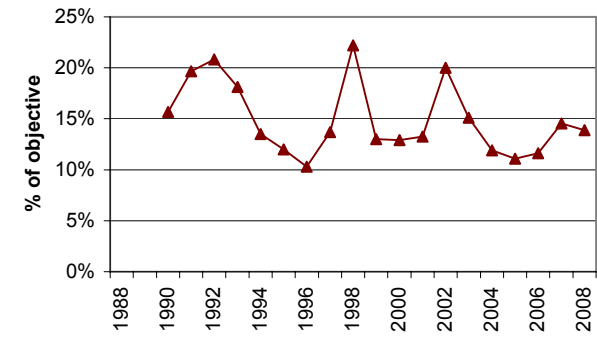

4. Other gases

(a) Maximum eight-hour CO

(b) Maximum one-hour NO₂

(c) Maximum one-hour SO₂
