

# Appendix A

Publication 2054 | May 2023

## Tables

Table 1. Summary of the number of recycled water effluents sampled (n), treatment trains and key wastewater treatment processes relevant to reduction of pollutants of concern. Total of 31 recycled water effluents were sampled.

Key Processes	Treatment Train	Sampled	n
Lagoon	TT1	Yes	8
Aerated lagoon, Lagoon	TT2	Yes	4
Aerated lagoon, Lagoon, Chlorine	TT3	No	-
ASP with extended aeration	TT4	Yes	6
ASP with extended aeration, MF/RO	TT5	No	-
ASP with extended aeration, Lagoon	TT6	No	-
ASP	TT7	Yes	4
ASP, chlorine	TT8	Yes	2
ASP, Lagoon	TT9	Yes	4
ASP, Lagoon, MF/RO	TT10	No	-
ASP, Lagoon, Chlorine	TT11	No	-
ASP with extended aeration, UF, MF/RO, Chlorine	TT12	Yes	1
ASP, Lagoon, RO, Chlorine	TT13	Yes	1
ASP with extended aeration, Chlorine	TT14	Yes	1

UF – Ultra filtration; MF – membrane filtration / RO - Reverse osmosis.

## EPA Publication 2054 Appendix A (Emerging contaminants in recycled water)

Table 12. Maximum concentrations of emerging contaminants detected in treated effluent, guideline values for drinking water (DWG), freshwater (FW) ecosystem protection and irrigation. Sources for guidelines listed in footnotes. For freshwater ecosystem guidelines (GV) or trigger values (TVs), the species protection level (99, 95, 90%) or the unknown protection assessment factor (AF) is shown along with the reliability and the default indicator is underlined. Values with † exceed DWGs, values shown with # exceed FGVs. Underlined analytes superscript indicates this compound was a Tier 1 priority substance (See O'Connor and Stevens, 2021 [Appendix 5I])

## EPA Publication 2054 Appendix A (Emerging contaminants in recycled water)

Table 12. (cont.) Maximum concentrations of emerging contaminants detected in treated effluent, guideline values for drinking water (DWG), freshwater (FW) ecosystem protection and irrigation. Sources for guidelines listed in footnotes. For freshwater ecosystem guidelines (GV) or trigger values (TVs), the species protection level (99, 95, 90%) or the unknown protection assessment factor (AF) is shown along with the reliability and the default indicator is underlined. Values with <sup>†</sup> exceed DWGs, values shown with <sup>#</sup> exceed FGVs. Underlined analytes superscript indicates this compound was a Tier 1 priority substance (See O'Connor and Stevens, 2021 [Appendix 5I])

DWG – drinking water guidelines

AGWR (2008). Australian Guidelines for Water Recycling - Phase 2: Augmentation of

# Figures

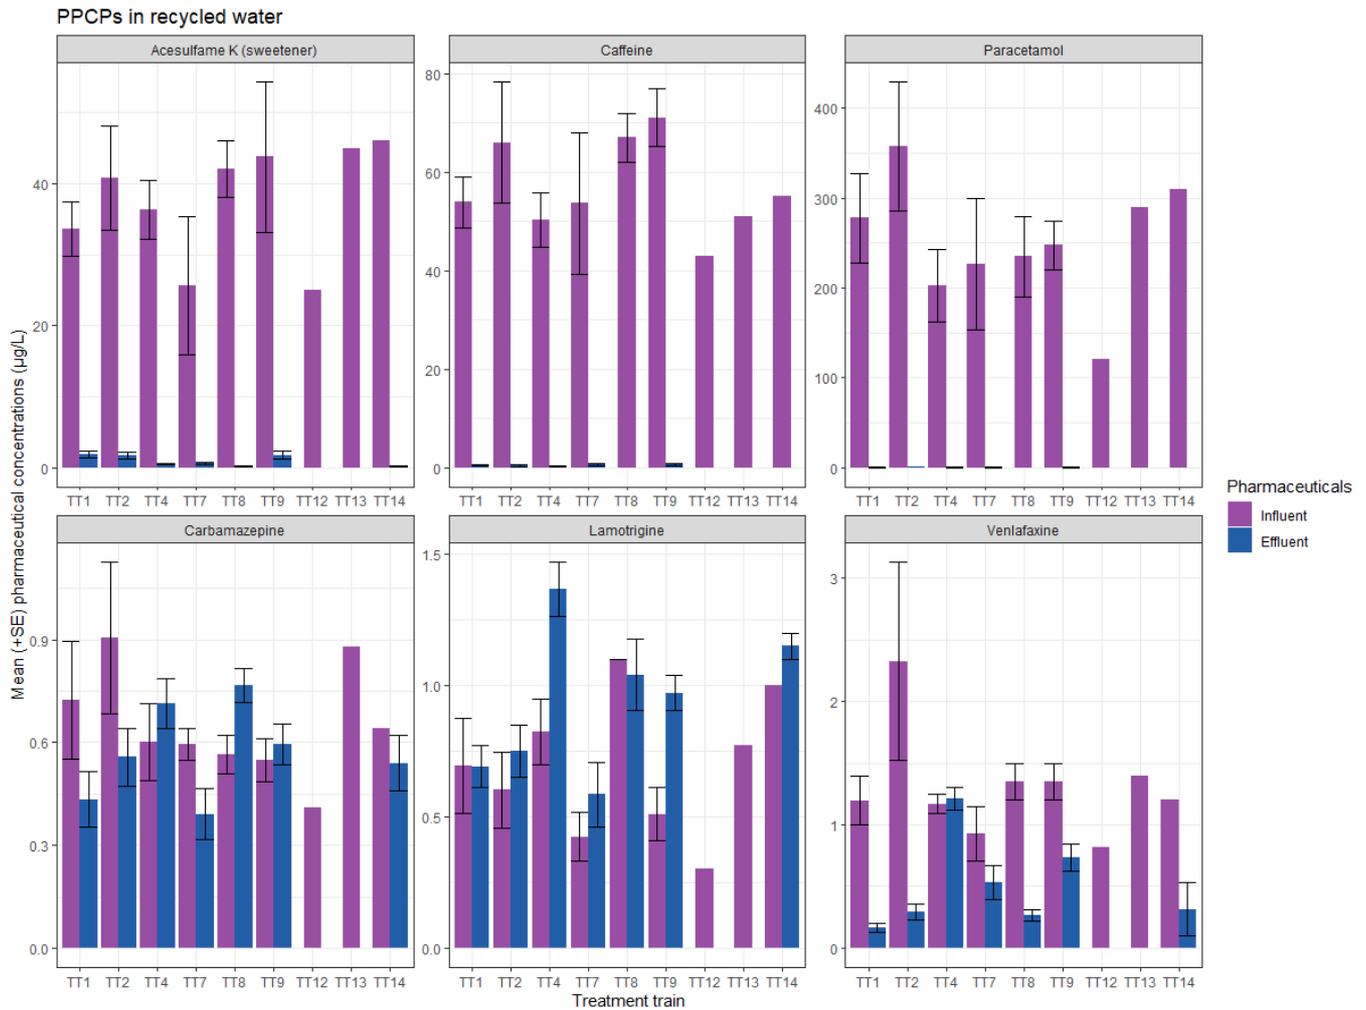

Figure 1. Mean concentration ( $\pm$ SE) of selected pharmaceuticals and personal care products in the influent and effluent from all sites ( $n=30$ ) and across seven different treatment trains. Sites per treatment train type: TT1:  $n = 8$ , TT2:  $n = 4$ , TT4:  $n = 6$ , TT7:  $n = 4$ , TT8:  $n = 2$ , TT9:  $n = 4$ , TT12:  $n = 1$ , TT13:  $n = 1$ , TT14:  $n = 1$ .

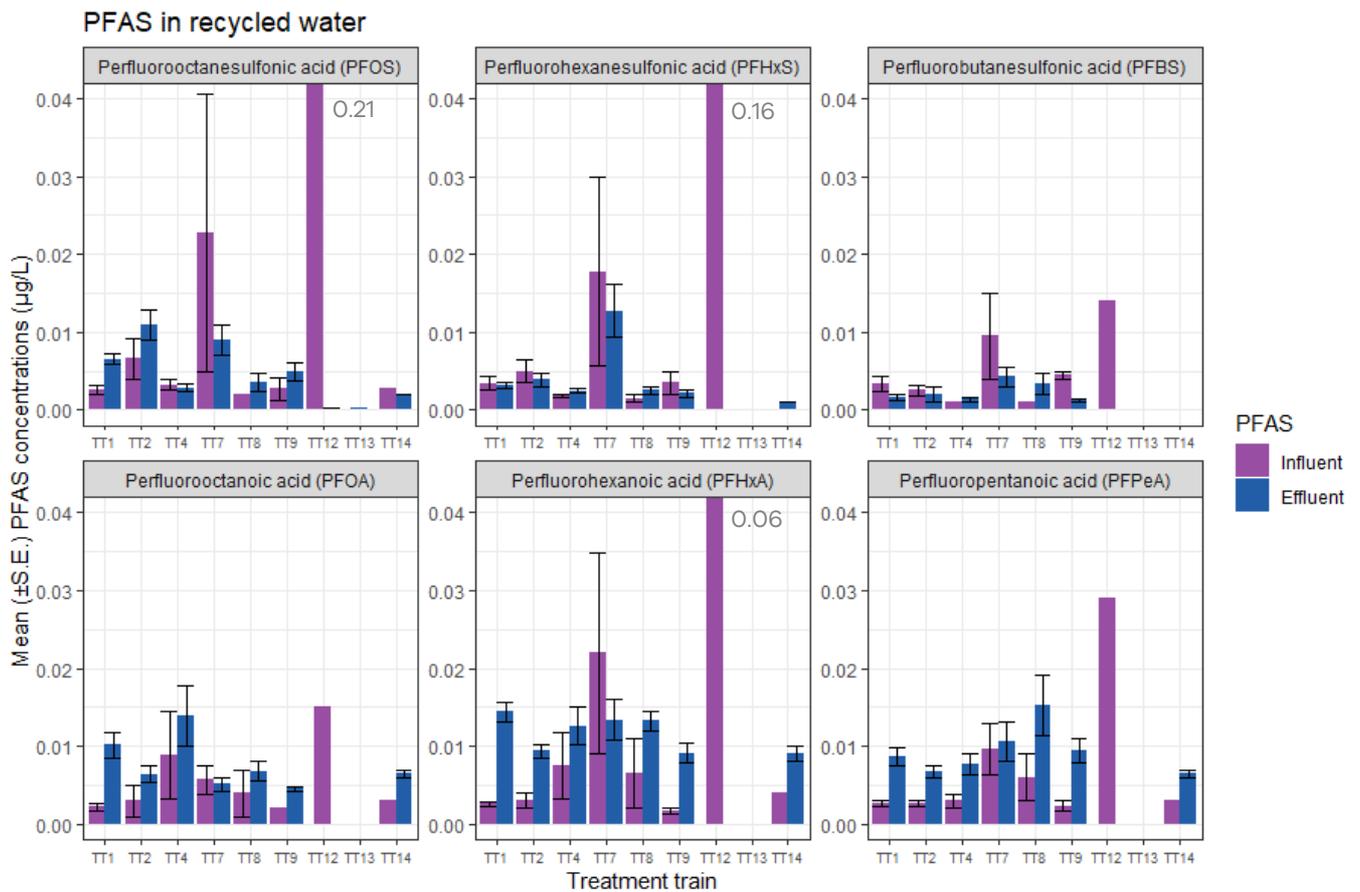

Figure 2. Mean ( $\pm$ SE) PFAS concentrations from influent and effluent samples across eight wastewater treatment train types. Sites per treatment train type: TT1: n = 8, TT2: n = 4, TT4: n = 6, TT7: n = 4, TT8: n = 2, TT9: n = 4, TT12: n = 1, TT13: n = 1, TT14: n = 1.
